High-throughput sequencing to analyze STR loci

An *ex vivo* proximity ligation assay

Enhanced protein expression in mammalian cells

Protease profiling for complex biological samples

REPORTS

- 111 **Detection of antigen interactions ex vivo by proximity ligation assay: endogenous dopamine D₂-adenosine A₂A receptor complexes in the striatum**
Pierre Trifilieff, Marie-Laure Rives, Eneko Urizar, Rebecca A. Piskrowski, Harshad D. Vishwasrao, John Castrillon, Claudia Schmauss, Maria Slätman, Mats Gullberg, and Jonathan A. Javitch
doi 10.2144/000113719
- 119 **Vectors bicistronically linking a gene of interest to the SV₄₀ large T antigen in combination with the SV₄₀ origin of replication enhance transient protein expression and luciferase reporter activity**
Matthew J. Mahon
doi 10.2144/000113720
- 127 **High-throughput sequencing of core STR loci for forensic genetic investigations using the Roche Genome Sequencer FLX platform**
Sarah L. Fordyce, Maria C. Avila-Arcos, Eszter Rockenbauer, Claus Børsting, Rune Frank-Hansen, Frederik Torp Petersen, Eske Willerslev, Anders J. Hansen, Niels Morling, and M. Thomas P. Gilbert
doi 10.2144/000113721

BIOTECHNIQUES FOCUS: PROTEOMICS

- 95 **Robust substrate profiling method reveals striking differences in specificities of serum and lung fluid proteases**
Douglas S. Watson, Kalyani Jambunathan, David S. Askeu, Krishna Kodukula, and Amit K. Galande
doi 10.2144/000113717
- 105 **A bioluminescent assay for the sensitive detection of proteases**
Donna M. Leippe, Duy Nguyen, Min Zhou, Troy Good, Thomas A. Kirkland, Mike Scurria, Laurent Bernad, Tim Ugo, Jolanta Vidugiriene, James J. Cali, Dieter H. Klaubert, and Martha A. O'Brien
doi 10.2144/000113716

Nuclear gems dotting the multinucleated larval muscles of *Drosophila melanogaster*. Body wall muscles of fruit fly larvae constitutively expressing fluorescently tagged Gemin3 stained for GFP (green), actin (red), and DNA (blue). Multiple image slices obtained using the Zeiss LSM 510 META confocal microscope were used to generate a maximum intensity projection. Credit: Ruben J. Cauchi, Department of Physiology & Biochemistry, University of Malta, Malta. Design by Yusef Ramelize.
